

Day 6 - Deployment Preparation and Staging Environment Setup-Furniro

GitHub Repository Configuration:

- Excluded the .env file from version control by adding it to the .gitignore file, ensuring sensitive data remains separate from the source code.

Vercel Deployment:

- Deployed the application through Vercel, which automatically ignores .env files for security purposes, preventing exposure of sensitive information.

Environment Variables Configuration:

- Added necessary environment variables directly in the Vercel during deployment

Error Log Monitoring:

After successfully deploying Furniro, I monitored the application for any errors. Utilizing Vercel built-in logging features, I reviewed the logs to identify and address potential issues promptly.
